Welcome

OutBack Power Systems is proud to continue designing and manufacturing solutions with you, the customer, in mind. OutBack maintains the philosophy that listening to our customers and innovating to meet their needs is paramount to our success.

This year we are pleased to introduce our newest product development, the SmartRE. SmartRE is the revolutionary Smart Renewable Energy solution from OutBack Power, bringing you simplified grid-tie solar with back-up power for residential and small commercial applications. Designed with an emphasis on ease of installation, a SmartRE solution installs and operates similarly to basic grid-tie solar inverters but with the unique additional benefit of providing UPS quality battery back-up during utility outages. Capable of being installed both indoors and outdoors the SmartRE is designed to meet your needs and can provide up to 69 kWh of power storage to be used in the event of an outage.

OutBack is continuing to expand its industry-leading level of customer service adding to our team of qualified technical and order service personnel and we are excited to announce a newly added direct dial line for Technical Support, (360) 618-4363, and expanded hours of operations (6am to 5pm PST). We will continue to listen to and learn from our customers, and continue to innovate.

We are confident that OutBack will continue to lead the way in bringing the solutions and services that people have come to depend on.

Thank you for your support as we continue *Powering the Planet*.

History

2001 OutBack was started by a passionate group of engineers who wanted to bring power conversion electronics technology into the 21st century.

This small startup quickly grew by offering innovative and well designed solutions to renewable energy problems. OutBack listened to their customers and made many of the changes that were suggested, creating a truly customer focused company in the power conversion electronics industry.

2002 OutBack introduces its first sealed sinewave inverter/charger, the FX2024 - with resounding success.

This single model changed the way people looked at system design by offering unprecedented flexibility in system design and expansion while the sealed construction allowed for uses which previously would have been considered too "extreme" for other inverter/chargers.

OutBack releases the MX60 solar MPPT Charge Controller which redefined performance and value, and quickly gained a reputation for getting the most power possible from a PV array - often making it more expensive to not use one.

2003 OutBack launches the first of the vented versions of the FX Series Inverter/Chargers.

These VFX models were introduced in direct response to our customers' requests providing higher power at a similar price as the sealed counterpart.

OutBack launches the PS2, value priced system integration accessories.

This line of accessories addressed the needs of our customers for competitively priced system integration accessories for smaller systems.

2004 OutBack releases the world's most efficient grid-interactive inverter/charger.

These models raise the bar for performance and value for battery-connected grid-interactive inverter/charger systems. OutBack introduces the PS1 fully integrated grid-interactive power system.

This unique system sets a new standard for system integration, performance and ease of installation in grid-interactive applications.

2005 OutBack reaches milestones in product deliveries and product recognition.

MX60 and FX Inverter production lines each ship 10,000th unit.

OutBack Power equipped teams sweep the top three places in the 2005 Solar Decathlon, an international competition between universities, to develop and build the most energy efficient home.

2006 OutBack launches FLEXware, a new line of balance of system components.

2007 OutBack expands product offerings to include the FLEXware Surge Protector, FLEXnet DC and FLEXmax 80.

OutBack Power Systems doubles manufacturing capability.

2008 OutBack Power Systems opens a new office and warehouse in Barcelona Spain.

OutBack expands product offerings to include the FLEXware PV.

2009 OutBack starts shipping the SmartRE Smart Renewable Energy System, a fully integrated grid-interactive solution.

- 4 SmartRE
- 8 Sinewave Inverter/Chargers
- 12 FLEXmax
- 13 MATE
- 14 FLEXnet DC
- 15 HUB
- 16 Remote Temperature Sensor
- 17 FLEXware Surge Protector
- 19 Auto Transformer
- 20 FLEXware 250
- 22 FLEXware 500
- 25 FLEXware 1000
- 29 FLEXware MP
- 30 Components
- 33 FLEXware PV

Off-Grid

Solar. Wind. Hydro. Generator. No matter what your energy source OutBack's products are engineered to provide your home or business with reliable electricity day-in and day-out. The OutBack modular system architecture allows your system to grow along with your power needs up to 36,000 watts. Power hungry appliances like washing machines, air conditioning and power tools are easily started by our inverter's substantial surge power capability. When not being used, the inverter enters a power save mode, which consumes as little as 3 watts, saving your battery power for when you need it the most. OutBack's innovative Maximum Power Point Tracking (MPPT) technology gets the most from your solar array or can also control hydro or wind turbine charging sources. Complete system status and control is easily monitored by a single control, instead of requiring the user to keep an eye on multiple displays and status indicators.

Grid-Interactive

Grid-Interactive renewable energy systems enable you to demonstrate your personal commitment to a renewable energy future. With the OutBack grid-interactive system, backup AC power is made available 24 hours a day in the event of a utility outage, providing reliable power, peace-of-mind and the ability to sell power back to the grid when excess power is available. Unlike traditional grid-tie systems OutBack's grid-interactive systems allow you to continue to utilize your renewable energy source in the event of a power outage. At night, the inverter's automatic power save mode ensures that energy is not wasted by needlessly charging your batteries from the utility grid. An average conversion efficiency of 91% using the California Energy Commission (CEC) test protocol provides greater savings and a shorter time period for system payback. OutBack's grid-interactive technology provides you more than a typical solar inverter, we also have an unmatched ability to utilize solar, wind and hydropower sources. OutBack grid-interactive inverters are designed to meet UL1741 specifications within the U.S. and Canada.

Mobile and Marine

OutBack's Mobile and Marine inverter/charger models provide the high performance and reliability you need no matter where your travels take you. Our die-cast metal construction allows mounting in any position, even upside down. The required AC input neutral/ground switching is taken care of by a fully integrated 30 amp AC transfer switch for shore chord or generator hook-up. Three circuit boards and a simple design make field servicing the unit easy no matter where you are. Rigorous testing at the factory ensures that each inverter/charger works the first time as well as for many years to come.

SMARTRE™ Grid-Interactive Solution

**SmartRE 2500/3000
with Battery Enclosure**

**SmartRE 5000/6000
with Battery Enclosures**

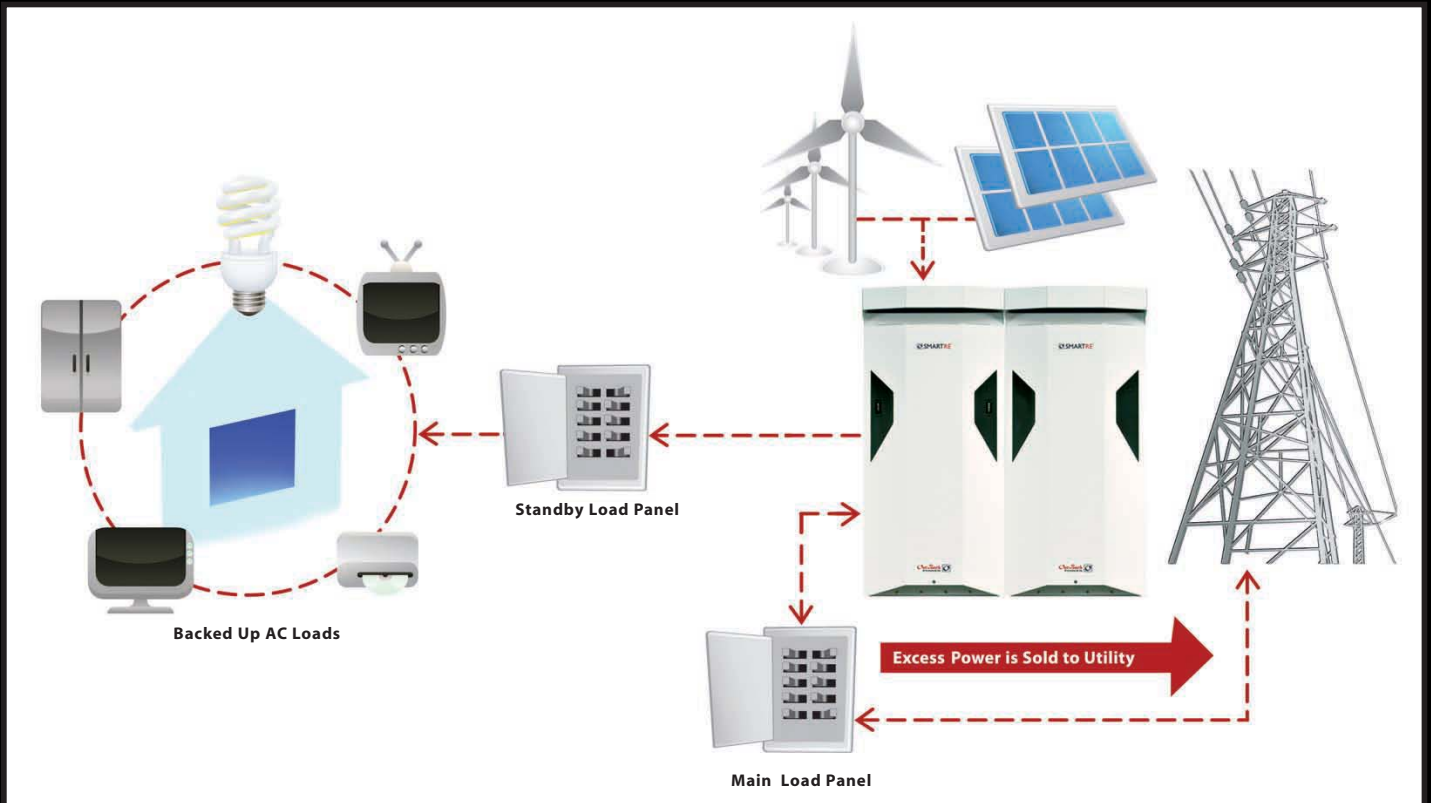

SmartRE Grid-Interactive System

SmartRE is the revolutionary Smart Renewable Energy solution from OutBack Power, bringing you simplified grid-tie solar with back-up power for residential and small commercial applications. Designed with an emphasis on ease of installation, a SmartRE solution installs and operates similarly to basic grid-tie solar inverters but with the unique additional benefit of providing UPS quality battery back-up during utility outages. An integrated ultra-fast AC transfer switch guarantees that even sensitive back-up loads, like computers, never know when a utility outage occurs. Recommended AGM batteries are maintained and charged by an innovative OutBack multi-stage charging process. This valuable feature assists in providing reliable back-up power and will help extend your battery life up to 10 years.

The SmartRE is a versatile product and can be installed both indoors and outdoors. Available in power levels up to 6kW and capable of providing as much as 69 kWh of back-up power during outages, there is a SmartRE solution for your application. With matching type 3R rainproof power electronics and battery enclosures constructed of aluminum, a SmartRE solution can be either wall or pad mounted, making this the most versatile grid-tie with battery backup solution on the market. This solution is designed and manufactured by OutBack Power to ensure that a SmartRE solution works reliably for years to come. A standard 5-year warranty, with an option to add an additional five year warranty, provides peace of mind.

Ease of installation, UPS quality battery back-up, and solutions as large as 6 kW along with proven OutBack engineering makes the SmartRE system the Smart choice for a premium Grid-Interactive solar power system.

There are two common types of Grid-Tie renewable energy systems: Basic Grid-Tie and Grid-Tie with Battery Back-up, also known as Grid-Interactive.

Basic Grid-Tie System

A basic Grid-Tie solar system generates electricity when the sun is shining. It supplies this power to your house and sends any excess back to the utility. It does this by inverting the DC power produced from the solar array into grid compatible AC power which is then sent to your main electrical panel to be used by your household appliances while any excess power is sold back to the utility. In the event of a utility power outage, your basic Grid-Tie inverter is automatically turned off and no power is produced, even when the sun is shining!

	System Type	
	Basic Grid-Tie	Grid-Interactive
Sells Power Back to the Grid	✓	✓
Lowers Utility Bill	✓	✓
Works During a Utility Power Outage		✓
Provides UPS Quality Backup Power		✓
Wind Turbine and Micro-Hydro Compatible		✓
Works with Multiple DC Sources on Same Inverter		✓

Grid-Interactive System

Just like a basic Grid-Tie system, a Grid-Interactive solar system such as the SmartRE generates electricity when the sun is shining and supplies this power to your house while sending any excess power back to the utility. It does this by inverting the DC power produced from the solar array into usable AC Power which is then sent to your main electrical panel to be used by your household appliances while any excess power is sold back to the utility. Where a Grid-Interactive system differs from a Grid-Tie system, is in its ability to charge batteries which are used as a back-up source when the power goes out. In the event of a grid power outage uninterrupted power is supplied to important household loads such as refrigerators, lights, and computers while your solar array continues to produce power and charge your batteries.

How does a SmartRE Grid-Interactive System work?

A SmartRE Grid-Interactive system uses battery storage in order to provide back-up power during utility outages. Here is how a system works: (see Figure 1)

1. Power from your solar array flows to a Maximum Power Point Tracking (MPPT) charge controller.
2. From the charge controller power flows to your battery bank which is made up of sealed maintenance free AGM or Gel cell batteries.
3. Power flows from the battery through the inverter in the SmartRE where the DC power is inverted to AC power. AC power goes to both the main panel, where excess power can be sold back to the utility, and to a standby load panel which is backed up during a utility outage.

Sinewave Inverter/Charger

OutBack inverter/chargers are the next generation in advanced power management. Each is a DC to AC sinewave inverter, battery charger and AC transfer switch housed within a tough die-cast aluminum chassis.

Just like the local utility grid, the inverter produces true sinewave AC electricity for your stand-alone or back-up power needs. Computers, TVs and pumps are just some of the examples of modern electronics that last longer and run better when powered with true sinewave electricity from an OutBack inverter. Starting up your air conditioning, washing machine or well pump is worry-free because of our high surge power capability.

Batteries and generators are the costly consumables when using inverters to generate electricity. The integrated smart battery charger uses multiple stages to perform quick recharging while prolonging battery life, saving your batteries and generator from unnecessary wear. Automatic switching between AC power sources is seamless due to an AC transfer switch that reacts in less than 16 milliseconds.

Unique networked communication is built into all OutBack products providing complete integration. Expanding your system with your growing power needs is as simple as adding additional inverters with our modular system architecture. Further flexibility is provided with the ability to be connected at any time in either parallel, series or three-phase power configurations. Industry leading OutBack reliability is achieved through simplified design and rugged construction.

FX Sealed Inverter/Chargers

The FX series is designed to survive in environments that would normally destroy other inverter/chargers. Protection for internal components is provided by our die-cast aluminum chassis with a powder coated finish to prevent corrosion. Internal and external cooling fins allow for heat transfer, enabling peak operating efficiencies as high as 93% and looking cool while doing it. Water and small particles are kept out through the generous use of gaskets and O-ring seals on all seams and openings. A protective conformal coating on all circuit boards provides the final line of defense against corrosion. The externally mounted "TURBO" cooling system improves performance in hot conditions.

VFX Vented Inverter/Chargers

The VFX series is designed for more protected installations. By utilizing an efficient active cooling design, the VFX models are available with AC output up to 3.6 kilowatts. Our tough die-cast aluminum chassis physically protects the internal components while the air intake includes an easily cleaned filter, which allows for ventilation while also keeping bugs and other debris out. All circuit boards are conformal coated to prevent corrosion from airborne moisture in humid conditions. The DC wiring cover (DCC) protects the DC terminals and battery cables from damage.

The FLEXmax family of charge controllers is the latest innovation in Maximum Power Point Tracking (MPPT) charge controllers from OutBack Power Systems. The innovative FLEXmax MPPT software algorithm is both continuous and active, increasing your photovoltaic array power yield up to 30% compared to non-MPPT controllers. Thanks to active cooling and intelligent thermal management cooling, both FLEXmax charge controllers can operate at their full maximum current rating, 60 Amps or 80 Amps respectively, in ambient temperatures as high as 104°F (40°C).

Included in all of the FLEXmax Charge Controllers are the revolutionary features first developed by OutBack Power, including support for a wide range of nominal battery voltages and the ability to step-down a higher voltage solar array to recharge a lower voltage battery bank. A built-in, backlit 80 character display shows the current status and logged system performance data for the last 128 days at the touch of a button. The integrated OutBack network communications allows FLEXmax series Charge Controllers to be remotely programmed and monitored via a MATE system display and provides unrivaled complete system integration.

FLEXmax MPPT Charge Controllers are the only choice when you demand a high performance, efficient and versatile charge controller for your advanced power system.

	FLEXmax 80	12 VDC systems 1000 Watts / 24 VDC systems 2000 Watts / 48 VDC systems 4000 Watts / 60 VDC Systems 5000 Watts	
PV Open Circuit Voltage (VOC)	150 VDC absolute maximum coldest conditions / 145 VDC start-up and operating maximum		
Standby Power Consumption	Less than 1 Watt typical		
Power Conversion Efficiency - Typical	FLEXmax 60	98.1% @ 60 Amps in a 48 VDC System	
	FLEXmax 80	97.5% @ 80 Amps in a 48 VDC System	
Charging Regulation	Five Stages: Bulk, Absorption, Float, Silent and Equalization		
Voltage Regulation Set points	10 to 80 VDC user adjustable with password protection		
Equalization Charging	Programmable Voltage Setpoint and Duration - Automatic Termination when completed		
Battery Temperature Compensation	Automatic with optional RTS installed / 5.0 mV per °C per 2V battery cell		
Voltage Step-Down Capability	Can charge a lower voltage battery from a higher voltage PV array - Max 150 VDC input		
Programmable Auxiliary Control Output	12 VDC output signal which can be programmed for different control applications (Maximum of 0.2 amps DC)		
Status Display	3.1" (8 cm) backlit LCD screen - 4 lines with 80 alphanumeric characters total		
Remote Display and Controller	Optional Mate or Mate2 with RS232 Serial Communications Port		
Network Cabling	Proprietary network system using RJ 45 Modular Connectors with CAT 5e Cable (8 wires)		
Data Logging	Last 128 days of Operation - Amp Hours, Watt Hours, Time in Float , Peak Watts, Amps, Solar Array Voltage, Max Battery Voltage Min Battery Voltage and Absorb for each day along with total Accumulated Amp Hours, and kW Hours of production		
Hydro Turbine Applications	Consult factory for approved Turbines		
Positive Ground Applications	Requires two Pole Breakers for switching both positive and Negative Conductors on both Solar Array and Battery Connections (HUB-4 and HUB-10 can not be used in positive ground applications)		
Operating Temperature Range	Minimum -40° to maximum 60° C (Power capacity of the controller is automatically derated when operated above 40° C)		
Environmental Rating	Indoor Type 1 (IP 30)		
Conduit Knockouts	One 1" (35mm) on the back; One 1" (35mm) on the left side; Two 1" (35mm) on the bottom

System Display and Controller

MATE & MATE2

The MATE system display and controllers are complete management tools for your OutBack Power system. Through the use of a single MATE you can remotely manage and monitor multiple inverter/chargers, charge controllers and monitoring devices.

The MATE and MATE2 are packed full of features to make system management simple. The easy-to-read 3.1" (8 cm) LCD is backlit for dark operating conditions. Four soft keys allow easy context-based navigation of menus and functions. Two hot keys give immediate access to AC and inverter functions.

A built-in clock and calendar function enables timer based programming of inverter and charger operation. This permits you to set the system to work with time-of-day power rates or to limit a generator's run time to a specific time period of the day or week. All of your settings are stored in permanent memory to eliminate the need to reprogram in the event of a system shutdown or battery replacement. The MATE and MATE2 include a RS232 port with DB9 jack for connection to the serial port of a PC computer. The MATE system display and controller is surface mounted while the MATE2 is flush mountable in a wall cut-out.

MATE

MATE2

MATE Specifications

MATE	Grey	Surface mount
MATE_B	Black	Surface mount
MATE2	Black	Flush mount
Interface Display	3.1" (8 cm) backlit LCD - four line, 80 alpha numeric characters	
Control Keypad	6 backlit silicone keys - dedicated inverter and AC input keys	
Status Indicators	Two LED Status Indicators - AC input (yellow), inverting (green)	
Communication Protocol	Proprietary OutBack Multi-drop using an OutBack HUB4 or HUB10	
Interconnection Cabling	Standard CAT 5 network cable with RJ45 modular jack - 10' (5 m) included	
PC Computer Interface	RS232 opto-isolated DB9 jack 9600 baud serial communication	
Microprocessor	16 MHz low power consumption version	
Setpoint and Data Memory	32K non-volatile flash RAM	
Clock / Calendar	On-board real time clock with battery backup	
Environmental Rating	Indoor Type 1 (IP 30)	
Maximum Cable Length	1000' (300 m)	
Warranty	Standard 2 year / Optional 5 year	
Weight	Shipping	1 lb (.5 kg)
Dimensions (H x W x L)	Shipping	5.75 x 4.25 x 2" (15 x 11 x 5 cm)

The OutBack Power Systems FLEXnet™ DC is the ultimate in DC System monitoring devices. Our integrated networked communications make valuable, usable data available from your system, viewable on an OutBack MATE communications device (screens seen below), providing you with the answers you need concerning your system's health, performance and efficiency. The FLEXnet DC provides real state-of-charge (S.O.C.) information about the life and state of your battery bank.

Battery Status Screen-Easily see your system's current condition with this at-a-glance display. This screen shows an easy to interpret "fuel gauge" style status bar, current state-of-charge and whether you are currently charging or discharging your batteries. This is useful for those system owners who want a way to quickly understand the current state of their battery bank.

Now Summary Screen-Monitor the amount of power your system is currently producing and consuming as well as the amount of power going IN and OUT of your battery bank. This screen also displays your battery bank's voltage and current state-of-charge, providing you with real-time production monitoring of DC sources, such as a solar array or small wind turbine, as well as consumption by loads.

Today Summary Screen-Monitor the cumulative energy your system has produced and consumed as well as the total amount of energy that has gone to charging your batteries today. This screen also displays today's lowest state-of-charge and allows you to see how your overall system production compares to system consumption.

History Summary Screen-Review historical energy production/consumption data for the most recent 128 days, including the minimum battery state-of-charge reached for each day. This screen can be used to watch power system production and consumption trends.

FN-DC Specifications

Battery Voltage Input Range	8.0 to 80.0 Volts DC	
Battery Voltage Resolution	0.1 Volts DC	
Number of Current Channels	One to Three (each can be a Source or Load)	
Current Range (Each Channel)	-1000.0 Amps to +1000.0 Amps DC	
Current Resolution	0.1 Amps DC	
State of Charge Display	0 to 100% (1% increments)	
Aux Relay Configuration	SPST, Magnetic Latching Relay	
Aux Relay Max Rating	5 Amps @ 30 Volts DC	
Current Shunt Type (order separately)	500 Amp / 50mv	
Display	Primary	OutBack Power MATE or MATE2 4 x 20 LCD
	Secondary	Five LED Indicators on front of FLEXnet DC
Battery AH Capacity Range	100 to 10,000 Amp Hours	
Data Logging Memory	Most recent 128 Days	
Programmable AUX Relay Settings	Battery Volts	Adjustable from 8.0 to 80.0 VDC
	State of Charge	Adjustable from 0 to 100%
	Time Delay	Adjustable from 0 to 240 Minutes
Accuracy	0.5% of Reading +/- 2 Least Significant Digits per channel	
Operating Temperature Range	0 - 50°C	
Mounting	3/4" Panel Mount Breaker Slot or Surface Mount	
Warranty	Standard 2 year	
Weight	Unit	5 oz. (.14kg)
	Shipping	2 lbs. (.90kg)
Dimensions (H x W x L)	Unit	0.74 x 3.72 x 6.60" (1.88 x 9.45 x 16.75 cm)
	Shipping	2.13 x 9 x 11.5" (5.4 x 22.86 x 29.21 cm)

Communications Manager

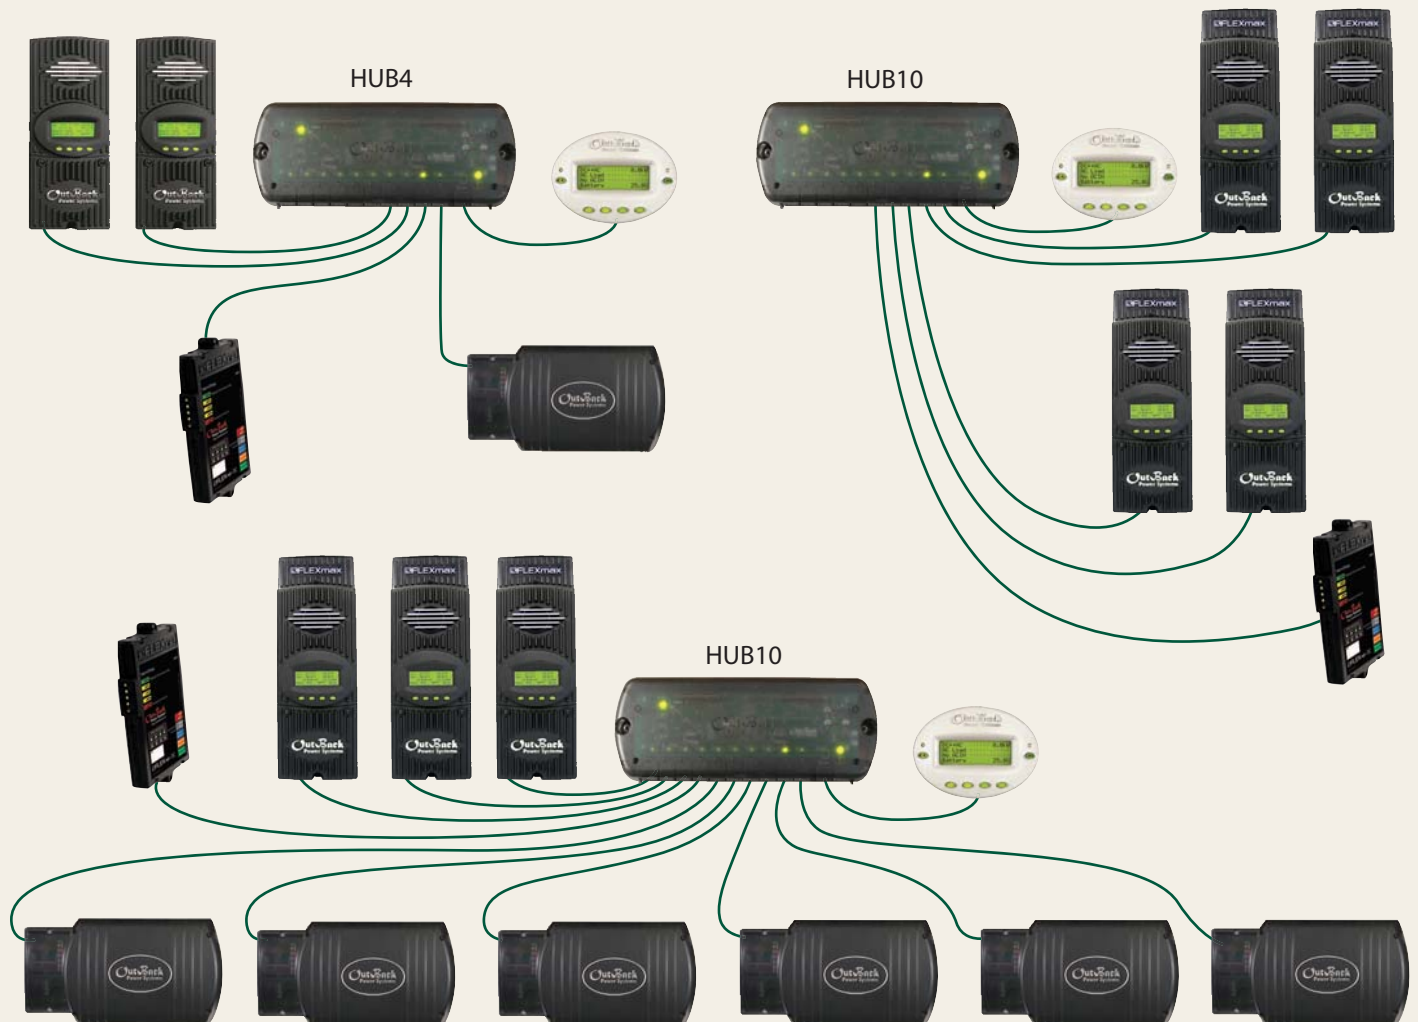

HUB

The HUB system communications managers are the backbone of your networked OutBack power conversion system. The OutBack HUB communicates stacking, load share and power save off/on signals. Interconnection cabling is standard Ethernet CAT5 with RJ45 modular jacks. Through the use of a HUB, your system is completely coordinated and managed by the MATE.

HUB Specifications

HUB Specifications		HUB4	HUB10
Number of Ports		4 Plus MATE	10 Plus MATE
Weight	Unit	1 lb (.5 kg)	1 lb (.5 kg)
	Shipping	3 lbs (1.4 kg)	3 lbs (1.4 kg)

	Shipping	12 x 6 x 5" (31 x 15 x 13 cm)	12 x 6 x 5" (31 x 15 x 13 cm)

Remote Temperature Sensor

RTS

The OutBack Remote Temperature Sensor (RTS) is a necessary tool for proper battery charging. All OutBack products with integrated battery charging have a temperature compensation system built-in which benefits from the installation of the optional RTS. The RTS ensures that your OutBack system knows the precise ambient temperature so that it can recharge your batteries safely and efficiently. Systems with multiple OutBack products connected to one HUB4 or HUB10 require only a single RTS to be installed.

15' (5 m) cable

Multi-Stage Battery Charging

Batteries are a key component in backup and off-grid systems, often serving as the only energy storage device. To guarantee that they function properly it is important that your batteries are maintained. A chief part of this maintenance is proper charging. Your batteries should always be maintained above a 50% level of charge and receive a complete recharge once a month to ensure operation at peak performance. Prolonged use of the battery below a 50% state of charge will adversely affect the long-term health of the battery and can result in premature failure.

The multistage charging process (5 stages) uses several regulation stages to allow fast recharging of the battery energy storage system while ensuring a long battery life, high performance and efficient operation of the overall system. The charging process begins with the **BULK** stage, where maximum current is sent to the batteries until the target “absorb” voltage is reached and the absorb stage of the charge begins. During **ABSORB**, the charger provides the batteries with the just enough current to hold at the set voltage for a preset amount of time. Following this cycle, the charging system changes between available OutBack charging products. Using a FLEXmax Series

Charge Controller, the batteries enter the **FLOAT** stage where they are given a maintenance charge until there is no excess renewable energy. The FX or VFX inverter/charger will go into **SILENT** mode where the charger turns off until the battery voltage drops to the “re-float” setting. At this point the inverter/charger initiates the maintenance float charge. This method reduces fuel and utility consumption.

It should be noted that the temperature of your batteries has an impact on the charging process. The OutBack RTS should be used to monitor this. In higher ambient temperatures, the battery charging regulation settings will be automatically reduced to prevent overcharging of the batteries. Conversely, in lower ambient temperature conditions, the regulation

settings will be increased to ensure complete recharging of the batteries. Batteries are composed of a group of individual cells. Through normal use, the charge of each individual cell will not be equal to the other cells. To address this, your batteries should be **EQUALIZED** either once each month or once every few months depending on usage. During the equalization charge the electrolyte in the battery is stirred up by gas bubbles, which help to create an equal mixture of water and acid. Simultaneously the full cells are overcharged which allows the low cells to “catch up” and all of the active material in the battery to be reconverted to its charged state. Depending on usage, the hardened battery plate material that is no longer active in the battery-sulfation can also be reduced by an equalization charge.

*MATE Adjustable

FLEXware™ Surge Protector

The OutBack Power Systems FLEXware Surge Protector is a seamlessly integrated balance-of-system component for the FX Series Inverter/Charger. The FLEXware Surge Protector was designed by OutBack engineers specifically for OutBack FX Series Inverter/Chargers, and provides multiple levels of protection for the vital electrical components of the Inverter/Charger in the event of an electrical surge or nearby lightning strike. The sophisticated design allows for both AC and DC protection on multiple circuits (two AC and one DC) via thermally fused Metal Oxide Varistors (MOVs). LED visual indicators provide at-a-glance status monitoring allowing system users to determine FLEXware Surge Protector operational status in real-time. The FLEXware Surge Protector is designed to operate between 120 to 240 VAC at 50/60 Hz and 12 to 48 VDC. Its multiple mounting configurations allow it to be incorporated into any OutBack system. The FW-SP-ACA mounts inside the FW-ACA for FLEXware 500 and 1000 systems, while the FW-SP-250 is designed to mount inside the FLEXware 250 AC Side Breaker Enclosure allowing for quick installations that keep your system protected and looking great.

The OutBack Power Systems FLEXware Surge Protector is the only choice when you want to protect your FX Series Inverter/Charger from the harmful effects of transient power surges. Ease of installation and seamless integration make it the obvious addition to your OutBack system.

Stacking

At OutBack, we adhere to a philosophy that a power system should be fully customizable to address your specific needs. Therefore we set out to create the world's first group of inverter/chargers that use a truly modular architecture. This modular architecture uses the next generation of a technique referred to as "stacking" to enable you to tailor your system for higher output power, increased charging capabilities and/or three-phase power configuration.

Whether stacked in parallel, classic series, series/parallel or three-phase there is always an inverter/charger which performs the task of Master. The Master talks to the other units through the HUB system communications manager while performing three major roles, keeping all inverter/chargers properly phased, controlling inverter and charger output levels, as well as putting unused inverters into Power Save mode to improve system efficiency at low AC load levels.

Parallel Stacking - More power at same output voltage

When the inverter/chargers are stacked in parallel all inverter and charger outputs are combined. This means that each inverter's AC output is added up to equal your total system AC output, up to 36,000 watts, in phase at the same 120 VAC/60 Hz or 230 VAC/50 Hz output voltage. Charging output amperage is also combined in this same manner.

Classic Series Stacking - More power at higher output voltage

Stacking inverter/chargers in classic series provides a system with split phase 120/240VAC. This method does not allow balancing between separate legs on a system and is can only be used in dual inverter/charger systems without the X-240 Auto Transformer.

OutBack Series/Parallel Stacking - More power at all output voltages

Series/Parallel stacking or OutBack (OB) stacking is unique to OutBack inverter/chargers. Never before has it been possible to have inverter/chargers balancing loads intelligently between two legs of AC power while seamlessly changing between series and parallel. OB Stacking uses the X-240 auto transformer to balance the loads between the two separate series legs of a system. The X-240 allows AC loads on leg 1 and leg 2 to be powered by any combination of inverter/chargers within your system. Even if there are only two inverter/chargers, connected in series, they can also function as if connected in parallel. This allows larger AC loads to be operated by a system without risking overloading one of the 120 VAC outputs.

3-Phase Stacking - More power for three-phase loads

Three inverter/chargers can be configured to provide 120/208 VAC or 230/400VAC four wire "WYE/Star" three-phase AC Power. An inverter/charger is used to power each of the three legs for 3-phase AC power. The loads on each of the inverters does not need to be kept balanced, each phase is independently voltage regulated.

Auto Transformer

PSX-240

The OutBack PSX-240 auto transformer can be used for step-up, step-down, generator and split phase output balancing or as a series stacked inverter to load balancing auto-former. Incorporating a transformer with 120 volt/30 amp primary and secondary side, a temperature activated cooling fan and a 25 amp dual breaker in a steal enclosure, the PSX-240 is ready to install in your custom application. Use for 120 or 240 VAC 60 Hz systems only.

Powering 240 volt items like deep well pumps with a single 120 volt inverter is possible thanks to the PSX-240's step-up capability. Its step-down feature allows you to charge your batteries with a 240 volt generator through a single 120 volt inverter. The PSX-240's ability to balance the output of series stacked inverter/chargers makes it a critical item when using the OutBack stacking 120/240 VAC configuration.

The FW-X240 is also available without the enclosure, for installation inside the FW500-AC or FW1000-AC enclosures.

Step-Up

Step-Down

Generator Balancing

OutBack Balancing

For applications with modest power requirements such as cabins, chalets, homes, remote communication sites and back-up power systems. The FLEXware 250 accommodates all of the essential protective devices in the smallest possible space at the lowest installed cost. Utilizing an extremely compact design and unique mounting features, **one or two** FLEXware 250 enclosures can be mounted on each end of a single FX Series Inverter/Charger. The FLEXware 250 enclosure is constructed of powder-coated aluminum is ETL listed. It provides breaker spaces for battery, PV array or PV GFDI breakers and mounting locations for AC GFCI outlet, AC breakers and an Input-Output-Bypass Assembly. In keeping with the philosophy of FLEXware, the FLEXware 250's flexibility is evident in the generous number of knock-outs allowing the installation of conduit, cable glands, and other installation accessories.

Breaker Configuration Diagram

AC Side

Holds up to four 0.75" (19 mm) wide AC rated panel mount breakers (not included). They are rated for 1-60 Amps of AC current. Support for optional AC Input-Output-Bypass Assembly. Holds one ground fault duplex AC outlet receptacle.

DC Side

Holds up to four 0.75" (19 mm) wide DC rated panel mount breakers (not included). They are rated for 1-80 Amps of DC current. Holds one 1.5" (39 mm) wide 175 or 250 Amp breaker. Includes large DC breaker handle guard.

FLEXware 250

Model: FW250

Description: DC and/or AC breaker enclosure for one FX Series Inverter/Charger

Includes: Ground bus bar, DC breaker handle guard, breaker mounting hardware and enclosure mounting hardware

Unit Dimensions (H x W x D)	Shipping Dimensions (H x W x L)	Shipping Weight	Enclosure Type
7.5 x 6.5 x 8.6" (19.1 x 16.5 x 21.8 cm)	9.75 x 8.4 x 11.6" (24.8 x 21.3 x 29.5 cm)	5 lbs. (2.3 kg)	Type-1 indoor (IP30)

Holds up to eight 1 to 80 Amp, one 175 or 250 Amp panel mount breaker and a GFCI AC outlet (not included).

- Does not use the DCA or FW-ACA for connection to an FX Series Inverter/Charger.
- DC current shunt not included

FLEXware 250 AC Input-Output-Bypass Assemblies

Field-installable kit for by-passing the AC input to the AC output for inverter maintenance, testing or installation. Also provides over-current protection for AC input and output.

Model: FW-IOB-S-120VAC

Includes: Three 60A 120VAC single pole PANEL mount breakers, sliding bypass interlock plate, wire and hardware kit

System Rating	Bypass Breaker	Input Breaker	Output Breaker
Single-Phase 120VAC 60 Amp 7.2 kW	One Pole @ 60 Amps 7.2 kW	One Pole @ 60 Amps 7.2 kW	One Pole @ 60 Amps 7.2 kW

Model: FW-IOB-S-230VAC

Includes: Three 30A 230VAC single pole PANEL mount breakers, sliding bypass interlock plate, wire and hardware kit

FLEXware™ 500

For applications with medium power requirements such as homes, light commercial or larger back-up power systems. The FLEXware 500 system architecture can support up to two OutBack FX Series Inverter/Chargers, up to two OutBack charge controllers and all the associated AC and DC components. Thanks to a very compact design, FLEXware 500 AC and DC enclosures mount with a

FLEXware MP in either a horizontal or vertical orientation to allow installation in more space-limited locations for a fast and professional looking wall-mounted installation. The FLEXware 500 accommodates all of the essential protective devices in two enclosures. The FLEXware 500 enclosure is constructed of powder-coated aluminum and has been ETL listed.

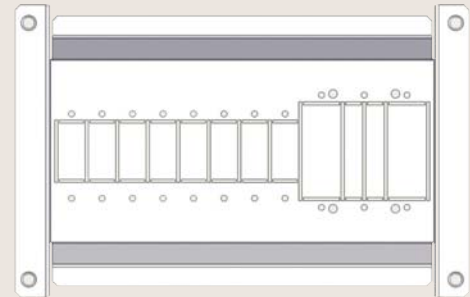

Breaker Configuration Diagram

AC Side

Holds up to sixteen DIN mount AC breakers (not included). Support for optional AC Input-Output-Bypass Assembly. AC breakers are rated from 10-16 Amps of AC current.

DC Side

Holds up to eight 0.75" (19 mm) wide breakers rated for 180 Amps of DC current, three 1" (26 mm) wide breakers rated for 100 or 125 Amps of DC current, or two 1.5" (32 mm) wide breakers rated for 175 or 250 Amps of DC current.

FLEXware™ 1000

For applications with large power requirements such as large residential, commercial or village power systems. The FLEXware 1000 system architecture is capable of supporting up to four OutBack FX Series Inverter/Chargers, four OutBack charge controllers, and all the required AC and DC components and wiring. Utilizing a compact design, FLEXware 1000 AC and DC enclosures accommodate all of the essential protective devices with lots of room for additional breakers and large cable connections and can be mounted either vertically or horizontally.

Breaker Configuration Diagram

AC Side

Holds up to thirty-two DIN mount AC breakers (not included). Support for optional AC Input-Output-Bypass Assembly. AC breakers are rated from 10-60 Amps of AC current.

DC Side

Holds up to eleven 0.75" (19 mm) wide breakers rated for 1-80 Amps of DC current, nine 1" (26 mm) wide breakers rated for 100 or 125 Amps of DC current or six 1.5" (32 mm) wide breakers rated for 175 or 250 Amps of DC current.

FW1000 With FW-IOB-Q-120/240VAC - Example of system with four VFX3648 Outback Power Inverter/Chargers in Series/Parallel

Part #	Description	Qty
VFX3648 Inverter/Charger	3600 W, 48 VDC, 45 Amp charger, 60 Amp AC input	4
FW-ACA	AC Conduit Adapter for all FX Series Inverter/Chargers to AC enclosure.	4
DCA	DC Conduit Adapter for all FX Series Inverter/Chargers to DC enclosure.	4
FW1000-DC	DC breaker enclosure – fits at the DC side of up to four FX Series Inverter/Chargers	1
OBB-175-125VDC-PNL	175 Amp, 125VDC breaker with 3/8" stud terminals	4
FW1000-AC	AC breaker enclosure – fits at the AC side of up to four FX Series Inverter/Chargers	1
FW-IOB-Q-120/240VAC	Quad inverter Input-Output-Bypass for FW1000	1
FW-MP	Mounting Plate for FW500 or FW1000 system	2
MATE	System Display and Controller	1
HUB-10	Ten Port, Up to 10 devices and one MATE	1
RTS	For use with FX, VFX or Charge Controller (Includes 15' (5 m) cable)	1
FW-X240	Autotransformer 4 kVA 120/240VAC 60Hz with 25 Amp \$390	1
FW-Cable175-36R	175 Amp 2/0 AWG DC cable 36 inches (915 mm) long with ring terminals on both ends with red heat shrink	4
FW-Cable175-36W	175 Amp 2/0 AWG DC cable 36 inches (915 mm) long with ring terminals on both ends with white heat shrink	4

FW1000 With FW-IOB-T-120/208VAC - Example of 3-phase system with three VFX3648 Outback Power Inverter/Chargers

Part #	Description	Qty
VFX3648 Inverter/Charger	3600 W, 48 VDC, 45 Amp charger, 60 Amp AC input	3
FW-ACA	AC Conduit Adapter for all FX Series Inverter/Chargers to AC enclosure.	3
DCA	DC Conduit Adapter for all FX Series Inverter/Chargers to DC enclosure.	3
FW1000-DC	DC breaker enclosure – fits at the DC side of up to four FX Series Inverter/Chargers	1
OBB-175-125VDC-PNL	175 Amp, 125VDC breaker with 3/8" stud terminals	3
FW1000-AC	AC breaker enclosure – fits at the AC side of up to four FX Series Inverter/Chargers	1
FW-IOB-T-120/208VAC	Triple inverter Input-Output-Bypass for FW1000	1
FW-MP	Mounting Plate for FW500 or FW1000 system	2
MATE	System Display and Controller	1
HUB-10	Ten Port, Up to 10 devices and one MATE	1
RTS	For use with FX, VFX or Charge Controller (Includes 15' (5 m) cable)	1
FW-Cable175-36R	175 Amp 2/0 AWG DC cable 36 inches (915 mm) long with ring terminals on both ends with red heat shrink	3
FW-Cable175-36W	175 Amp 2/0 AWG DC cable 36 inches (915 mm) long with ring terminals on both ends with white heat shrink	3

FW1000 With FW-IOB-T-230/400VAC - Example of 3-phase system with three VFX3024E Outback Power Inverter/Chargers

Part#	Description	Qty
VFX3024E	3000W, 24VDC, 85 Amps DC charger, 30 Amps AC input	3
FW-ACA	AC Conduit adapter for all FX Series Inverter/Chargers to AC enclosure	3
DCA	DC Conduit adapter for all FX Series Inverter/Chargers to DC enclosure	3
FW1000-DC	DC breaker enclosure - fits at the DC side of up to four FX Series Inverter/Chargers	1
OBB-250-125VDC-PNL	DC Breaker 250 Amps	3
FW1000-AC	AC breaker enclosure - fits at the AC side of up to four FX Series Inverter/Chargers	1
FW-IOB-T-230/400VAC	Triple inverter Input-Output-Bypass for FW500	1
FW-MP	Mounting Plate for FW500 or FW1000 System	2
MATE	System display and Controller	1
HUB10	Ten Port, up to 10 devices and one MATE	1
RTS	For use with FX, VFX or Charge Controller (Includes 15' (5m) cable)	1

The FLEXware MP is a one-piece, powder-coated aluminum mounting plate for FLEXware 500 and FLEXware 1000 enclosures. Utilizing stainless steel mounting hardware, the integrated locating bolts make installation quick and easy by providing guides to line up enclosures and inverter/chargers. A single FLEXware MP is designed to accommodate a FLEXware 500 while two FLEXware MPs are utilized in a FLEXware 1000 configuration.

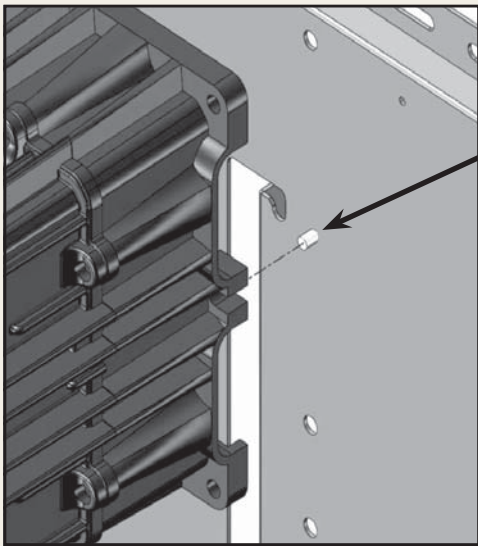

Side View of Integrated Locating Bolts

Single MP Configuration for FLEXware 500

Dual MP Configuration for FLEXware 1000

Angled View of Integrated Locating Bolts

Model: FW-MP

Description: FLEXware system mounting plate

Unit Dimensions (H x W x D)

20.3 x 46.3 x .8" (51.6 x 117.6 x 2.1 cm)

Shipping Dimensions (H x W x L)

1.15 x 22.9 x 48.4" (2.9 x 58.2 x 123 cm)

Shipping Weight

14 lbs. (6.4 kg)

Components

OutBack DIN Mount Breakers

DIN rail mountable, hydraulic-magnetic type breakers that can be used for input, output or load circuits.

Model	Current Rating	Voltage Rating	Branch Circuit	Variation	Width
OBB-15-120VAC-DIN	15 Amp	120VAC 50/60Hz	10k AIC	Single pole	0.50" (13 mm)
OBB-15D-240VAC-DIN	15 Amp	120/240VAC 50/60Hz	10k AIC	Dual pole	1.0" (26 mm)
OBB-20-120VAC-DIN	20 Amp	120VAC 50/60Hz	10k AIC	Single pole	0.50" (13 mm)

- ETL Listed for 150 VDC max open circuit. For PV applications.

Components

OutBack PV Ground-Fault Detection and Interruption System

Ground fault detection and interruption is required by US National Electric Code for PV arrays mounted on or within a specified vicinity of residential dwelling roofs as a safety precaution. The OutBack PV Ground-Fault Detection and Interruption System protects wiring and system components for one, two or four PV arrays when used in a FLEXware 250, FLEXware 500 or FLEXware 1000.

Model	Description	Terminals	Width
OBB-GFDI-80-150VDC-PNL	PV Ground-Fault Detector Interrupter 80 Amp 150VDC single pole panel mount	1/4" stud	1.515" (38.5 mm)
OBB-GFDI-80D-150VDC-PNL	PV Ground-Fault Detector Interrupter 80 Amp 150VDC two pole panel mount	1/4" stud	2.265" (57.3 mm)
OBB-GFDI-80Q-150VDC-PNL	PV Ground-Fault Detector Interrupter 80 Amp 150VDC four pole panel mount	1/4" stud	2.775" (95.9mm)

Uses two, three or four 3/4" wide panel mount breaker spaces

FW-X240 Auto-transformer

Designed to be housed within the FLEXware 500 or FLEXware 1000 AC enclosures. The FW-X240 Auto-transformer with a 120 volt/30 Amp primary and secondary winding can be used for step-up, step-down, generator and split-phase output balancing for series stacked inverters. It can transfer 2kW from one 120 VAC leg of a generator or the total rating of an OutBack stacked series/parallel 120/240 VAC inverter/charger configuration.

Model	Description	Includes
FW-X240	Auto-transformer 4 kVA 120/240VAC 60Hz with 25 Amp dual pole breaker for mounting inside of FLEXware 500-AC or FLEXware 1000-AC	Auto-transformer , 25 Amp dual pole breaker and mounting hardware

DC Bus Bars

OutBack Power Systems DC bus bars are designed to enable the most complex of code compliant DC cable connections.

Model	Description	Includes
FW-BBUS	Breaker Bus allows connection of two 175-250 Amp, three 100-125 Amp, four 1-80 Amp DC breakers or three 500 Amp DC current shunts	Plated copper plate rated for 500 Amps and two 5/16 inch bolts for mounting
FW-CBUS-8	Combiner Bus connects up to eight DIN mounted breakers or six DIN mounted fuse holders	Two 2/0 AWG box lug terminals - plated copper plate rated for 200 Amps
FW-CBUS-12	Combiner Bus connects up to twelve DIN mounted breakers or eight DIN mounted fuse holders	Two 2/0 AWG box lug terminals - plated copper plate rated for 200 Amps
FW-SBUS	Shunt Bus allows up to four high current cable connections on same side of DC shunt	Two 3/8 inch bolts solid brass rated for 1000 Amps

DC Current Shunts

When used with an amp hour meter OutBack Power Systems DC current shunt kits One shunt kit is included standard on FLEXware 500 and FLEXware 1000 DC enclosures.

Model	Description	Includes
FW-SHUNT250	500 Amp DC current shunt with terminal bus bar for mounting on top of a FX Series Inverter/Charger	Shunt, mounting hardware and terminal bus bar for connection to FX Inverter's DC negative terminal
FW-SHUNT500	500 Amp DC current shunt with terminal bus bar	Shunt, terminal bus bar and one white insulator and mounting screws

Components

Conduit Adapters

Allows connection of the FX and VFX Series Inverter/Chargers to FLEXware 500 and FLEXware 1000 enclosures, one FW-ACA and DCA required per FX Series Inverter/Charger.

Model	Description	Includes
FW-ACA	Adapter for AC end of FX Series Inverter/Charger	FW-ACA and mounting hardware
DCA	Adapter for DC end of FX Series Inverter/Charger	DCA, bushing and mounting hardware

Mounting Brackets

FW-CCB and FW-CCB2 mounting brackets allow OutBack Power Systems charge controllers to be mounted on the side of FW500-DC or FW1000-DC enclosures. FW-CCB2-T mounting bracket allows OutBack Power Systems charge controllers to be mounted on the top of FW500-DC or FW1000-DC enclosures. FW-MB1 mounting bracket allows OutBack Power system displays to be mounted on the side of FW500-AC and FW1000-AC enclosures.

Model	Description	Includes
FW-CCB	Bracket for mounting a single FLEXmax Series Charge Controller	Bracket, bushings and mounting hardware
FW-CCB2	Bracket for mounting two FLEXmax Series Charge Controllers	Brackets, bushings and mounting hardware
FW-CCB2-T	Bracket for top mounting two FLEXmax Series Charge Controllers	Bracket, bushings and mounting hardware
FW-MB1	Bracket for mounting a MATE or MATE2 System Display	Bracket, bushings and mounting hardware

DIN Rail End Clamp

Model	Description	Width
FW-EC-DIN	DIN rail mountable securing device for DIN rail mountable fuses or breakers.	.4" (10 mm)

DC Cable Assemblies

DC interconnect cable assemblies for wiring between inverter/chargers and breakers or DC shunts. Can also be used as battery interconnects. The THW type cable assemblies are UL listed and NEC compliant with a maximum voltage rating of 1000VDC and a temperature rating of 105°C.

Model	Description	Hole to hole length
FW-CABLE250-15R	250 Amp 4/0 AWG (11.7 mm) DC cable 15 inches (380 mm) long with ring terminals on both ends and red heat shrink. For connection from 250 Amp DC breaker to inverter positive terminal.	19" (483 mm)
FW-CABLE175-15R	175 Amp 2/0 AWG (9.26 mm) DC cable 15 inches (380 mm) long with ring terminals on both ends and red heat shrink. For connection from 175 Amp DC breaker to inverter positive terminal.	19" (483 mm)
FW-CABLE250-36R	250 Amp 4/0 AWG (11.7 mm) DC cable 36 inches (915 mm) long with ring terminals on both ends and red heat shrink. For connection from 250 Amp DC breaker to inverter positive terminal.	40" (1016 mm)
FW-CABLE175-36R	175 Amp 2/0 AWG (9.26 mm) DC cable 36 inches (915 mm) long with ring terminals on both ends and red heat shrink. For connection from 175 Amp DC breaker to inverter positive terminal.	40" (1016 mm)
FW-CABLE250-36W	250 Amp 4/0 AWG (11.7 mm) DC cable 36 inches (915 mm) long with ring terminals on both ends and white heat shrink. For connection from DC current shunt to inverter negative terminal.	40" (1016 mm)
FW-CABLE175-36W	175 Amp 2/0 AWG (9.26 mm) DC cable 36 inches (915 mm) long with ring terminals on both ends and white heat shrink. For connection from DC current shunt to inverter negative terminal.	40" (1016 mm)

- All ring lugs have 3/8" (9.53 mm) diameter hole.

The OutBack Power Systems FLEXware PV combiner series sets the new standard for PV balance-of-system hardware. Ideal for both small or large systems, the FLEXware PV8 and FLEXware PV12 accommodates the overcurrent protection requirements of your application. From 150VDC breakers for low voltage PV systems, to 600VDC fuse holders for high voltage PV systems, the FLEXware PV Combiner series handles it all.

Designed to survive in outdoor environments, the rainproof, type 3R powder coated aluminum chassis can be mounted on a wall, sloped roof or pole. The unique angled negative terminal bus bar design makes wiring fast and easy without the larger output conductors blocking access to the smaller input terminals. Dual output lug terminals are included for up to 2/0 AWG conductors. The tinted flame-retardant polycarbonate deadfront panel creates a clean appearance while preventing accidental contact with the live terminals and is easily removable during installation.

The FLEXware PV Combiner makes it easy to take your installation to the next level.

FLEXware™ PV Specifications

		FWPV-8	FWPV-12
Enclosure Material		Powder coated aluminum with stainless steel hardware	Powder coated aluminum with stainless steel hardware
Mounting Options		Vertical wall mount, pole mount or sloped roof mount to 14 degrees incline (3 in 12 roof pitch)	Vertical wall mount, pole mount or sloped roof mount to 14 degrees incline (3 in 12 roof pitch)
Enclosure Rating		Outdoor Rainproof, UL Type 3R	Outdoor Rainproof, UL Type 3R
Enclosure Security		Padlock hole in chassis and cover for up to 3/8 inch pad lock	Padlock hole in chassis and cover for up to 3/8 inch pad lock
Output Terminals		#14 - 2/0 AWG (2.08 - 67.43 mm ²) Two box lug terminals included	#14 - 2/0 AWG (2.08 - 67.43 mm ²) Four box lug terminals included
Number of separate circuits		One Circuit	One or Two Circuits
Number of 150VDC breakers		up to 8	up to 12 (two groups of six)
Number of 600VDC fuse holders		up to 6	up to 8 (two groups of four)
Input Terminal		150VDC Breakers / #14 - 6 AWG (2.08 - 13.3 mm ²) 600VDC Fuse / #14 - 10 AWG (2.08 - 5.26 mm ²)	150VDC Breakers / #14 - 6 AWG (2.08 - 13.3 mm ²) 600VDC Fuse / #14 - 10 AWG (2.08 - 5.26 mm ²)

* Specifications subject to change without notice. Use appropriate wire size in accordance with NEC.

OutBack DC DIN Mount Breakers

DIN rail mount breakers are hydraulic-magnetic type and are not affected by high ambient temperatures.

Model	Current Rating	Voltage Rating*	Terminals	Width
OBB-1-125VDC-DIN	1 Amp	125VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-2-150VDC-DIN	2 Amp	150VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-3-150VDC-DIN	3 Amp	150VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-4-150VDC-DIN	4 Amp	150VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-5-150VDC-DIN	5 Amp	150VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-6-150VDC-DIN	6 Amp	150VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-8-150VDC-DIN	8 Amp	150VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-9-150VDC-DIN	9 Amp	150VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-10-150VDC-DIN	10 Amp	150VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-15-150VDC-DIN	15 Amp	150VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-20-125VDC-DIN	20 Amp	125VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-30-125VDC-DIN	30 Amp	125VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-50-125VDC-DIN	50 Amp	125VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)
OBB-60-125VDC-DIN	60 Amp	125VDC	#14 to 2 AWG clamp terminals	0.5" (13 mm)

* Approved for maximum VOC of 150 VDC by ETL for PV array applications only.

OutBack High Voltage DIN Mount Fuse Holders and Fuses

Fuse holders are DIN rail mount with #8 AWG set-screw type compression terminals. Touch-safe design and not rated for load make or load break usage.

Model	Description	Current Rating	Voltage Rating	Width
OBF-6-600VDC	Fuse	6 Amp	600VDC	N/A
OBF-10-600VDC	Fuse	10 Amp	600VDC	N/A
OBF-15-600VDC	Fuse	15 Amp	600VDC	N/A
OBFH-30-600VDC-DIN	Fuse Holder	30 Amp	600VDC	0.7" (18 mm)

Terminal Bus Bars

Used for adding more wire terminations or for isolating multiple positive/negative circuits. All TBB models have three #1/0 to 14 AWG and eight #6 to 14 AWG screw type compression terminals, which means no ring lugs are required. Available with black, white, red, blue and brown insulators. All required TBBs are included with the AC Input-Output-Bypass Assemblies.

Model	Description	Terminals
TBB-GROUND	Ground/Neutral terminal bus bar and mounting screws (no insulators)	Three #1/0 to 14 AWG and Eight #6 to 14 AWG screw type compression
TBB-BLACK	Bus bar with black insulators and mounting screws	Three #1/0 to 14 AWG and Eight #6 to 14 AWG screw type compression terminals
TBB-BLUE	Bus bar with blue insulators and mounting screws	Three #1/0 to 14 AWG and Eight #6 to 14 AWG screw type compression terminals
TBB-RED	Bus bar with red insulators and mounting screws	Three #1/0 to 14 AWG and Eight #6 to 14 AWG screw type compression terminals
TBB-WHITE	Bus bar with white insulators and mounting screws	Three #1/0 to 14 AWG and Eight #6 to 14 AWG screw type compression terminals
TBB-BROWN	Bus bar with brown insulators and mounting screws	Three #1/0 to 14 AWG and Eight #6 to 14 AWG screw type compression terminals
